tPrime™ Series 280T-S
ULTRASONIC HEAT METER

Applications

- Residential submetering
- Commercial buildings
- District heating / cooling
- HVAC
- Green energy management
- AMR and Billing

Features

- Wear-free. Maintenance-free
- Unique sensor design for robust performance in both clear water and dirty water
- Multipath technology for increased accuracy
- Excellent long-term stability. Accuracy does not degrade over time
- Exceed OIML R75 class 2. Billing grade
- IP68 water-proof rated for the sensor, IP67 for the integrator
- Powered by both battery and MBus for extended lifespan
- For both heating and cooling circuits
- Free positioning
- Ready for AMR with M-Bus / Modbus / BACnet interface
- Low cost over extended lifespan
- Data Logger with 24 monthly totals
- SpireCapture AMR/AMI and Billing solutions
The tPrime™ series ultrasonic heat meter, often called BTU meter, offers the most advanced heating/cooling energy measurement by using state-of-the-art ultrasonic flow measurement technology. It does not have any moving parts that can wear or tear, thus, literally requires no maintenance.

With its maximum 200°F / 95°C water operating temperature and nominal pressure of 1.6MPa, the technical specifications of the tPrime™ series meet the standards for residential and commercial utility metering. The wide dynamic range allows for a load of up to double the rating, thereby ensuring high operation security. The large display can be set to display the heat consumption, temperature, flow total, working time, flow rate and more. The meter also has a remote readout which could be configured as M-Bus, RS485/Modbus, BACnet and more.

This new BTU meter system is powered by a lithium battery. However, whenever an MBus concentrator is connected, it will automatically draw power from the concentrator through the MBus connection. This unique feature extends the battery life of the meter.

The BTU calculation is according to the EN1434 heat meter standard. The formulas have been carefully implemented in the microprocessor to reduce the computational error to a minimum.

Spire Metering's ultrasonic BTU meter stands out among the competition due to its unique sensor design and multipath technology. It is able to work reliably even when the water is dirty. Both commercial and residential installations can profit from the advantages of the wear-free heating/cooling energy measurement, namely; precision, operation security and long service life.
tPrime™ Series 280T-S
ULTRASONIC HEAT METER

Operating Principle

The tPrime™ series BTU meter is consisted of an ultrasonic flow sensor, a pair of PT1000 temperature sensors and an integrator. The microprocessor-based integrator controls the ultrasonic sensor to transmit and receive ultrasound in an orderly fashion so as to conduct precise flow measurement. It also has electronics dedicated to the PT1000 sensor to measure the temperature in the supply pipe as well as the return pipe. The integrator calculates the heat energy based on the flowrate and the temperature difference between the supply and the return.

The figure below illustrates how the thread type ultrasonic flow sensor works. Two ultrasonic transducers (A and B) are mounted on the flowcell body of the flow sensor, one is on the upstream and the other on the downstream. Two reflectors are used to direct the sound from one sensor to another. The integrator operates by alternately transmitting and receiving a burst of sound energy between the two transducers and measuring the transit-time it takes for sound to travel between the two transducers. The difference in the transit-time measured corresponds directly to the velocity of the liquid in the pipe.

Unique Multi-path Technology

For large size meters, it is not easy to install the flow sensor perfectly in line with the pipe line. A small misalignment could cause flow profile distortion inside the flow sensor, thus, causing significant measurement errors. Spire Metering developed a unique multi-path technology to solve this problem. Two pairs of ultrasonic transducers are mounted on the flow sensor body to interrogate the flow from two different paths (refer to figure below.) A flow calculation algorithm based on fluid dynamics theory is then used to derive an average flow reading with improved accuracy.

Thread Type (Small)

Flange Type (Large)
The tPrime™ series BTU meter offers a variety of interface options, such as M-Bus, RS485 with Modbus or BACnet. It is very flexible to be integrated into an AMR/AMI system.

Spire Metering also offers a complete range of AMR/AMI solutions as well as an integrated billing system. Its SpireCapture system is a cutting edge fixed automatic meter reading system which integrates both wired and wireless AMR/AMI technologies. It provides a unified platform for meter reading and data management through M-Bus and GPRS networks, as well as TCP/IP networks. In addition, it works seamlessly with Spire Metering’s billing software to make data exchange easy, fast and reliable.

SpireCapture is an advanced, highly robust meter reading solution that delivers comprehensive usage information as well as timely, high-resolution meter reading. This data enables gas, water, heat and electric utilities to eliminate on-site visits and estimated reads, reduce theft loss, implement time-of-use billing, and profit from all of the financial and operational benefits of fixed-network AMI/AMI.

A typical M-Bus based AMR system is illustrated in the below figure. It is consisted of a number of M-Bus utility meters, several M-Bus concentrators, a GPRS wireless modem for each concentrator and a data center. The concentrator communicates with the data center through a GPRS network. The data center first issues a meter reading command and sends it to the wireless network. The modem receives the command and forwards it to the M-Bus concentrator. Then, the concentrator either replies to the command with requested data or passes the command to its sub meters transparently.

For information on AMR/AMI parts, such as concentrators, repeaters, protocol convertors, data collection devices and etc., please contact solutions@spiremt.com.

**Notes:**

* Weight may differ depending on accessories.

** For meters of size DN40 and smaller, the tail piece and thermal well of those meters could have threaded BSP or NPT joint.

The flange is standard DIN PN16 flange. ANSI flange is available upon request.

*** L₁ equals L plus 94mm for DN15, 102mm for DN20, 121mm for DN25, 137mm for DN32 and 128mm for DN40.
**tPrime™ Series 280T-S**
ULTRASONIC HEAT METER

**Electrical Data**

- **Power Supply:** Battery, 3.6V, Lithium. Alternatively, the meter could be powered by MBus with current draw less than 3mA
- **Replacement Interval:** 5 years at t<sub>e</sub>, <30°C (86°F)
- **Power Consumption:** <0.2W
- **Standby Current:** <10μA
- **Backup Power Supply:** Internal SuperCap
- **Communication Interface:** M-Bus (default). Optional: RS485 with MODBUS or BACnet/MSTP
- **CE approval:** EN61326-1:2006

**Accuracy / MPE (Maximum Permissible Error)**

MPE according to OIML R75 / EN1434, the whole system error is the combination of the following:

- **Calculator (Integrator):**
  \[ E_c = \pm (0.5 + \frac{\Delta \theta_{min}}{\Delta \theta}) \]
- **Temperature Sensor:**
  \[ E_t = \pm (0.5 + 3\frac{\Delta \theta_{min}}{\Delta \theta}) \]
- **Flow Sensor:**
  \[ E_f = \pm (2 + 0.02 \frac{q}{q_0}) \]

Here \( \Delta \theta \) is the temperature difference between the flow (supply) and return of the heat exchange circuit. \( q \) is the flow rate and \( q_0 \) is the nominal flow rate.

**NOTE:** The actual error of 280T-S meters is much smaller than the above MPE.

**Calculator (Integrator)**

- **Display:** LCD, 8 digits
- **Resolution:** 999.99999 - 999999.99 - 99999999
- **Energy Unit:** KWh – MWh – GJ
- **Communication Protocol:** M-Bus (default). Optional: MODBUS or BACnet
tPrime™ Series 280T-S
ULTRASONIC HEAT METER

**Temperature Measurement**

- Sensor Type: PT1000, 2-wire.
- Sensor Measurement Range: 0~150°C (32~302°F)
- Difference Range: ΔΘ: 3K-70K
- Permissible Operating: Θ: 2~60°C (35~140°F) for long term and up to 95°C (203°F) for short term

**Mechanical Data**

- Metrological Class: 2 (according to OIML R75 / EN1434)
- Environmental Class: B
- Electromagnetic Class: E1
- Environmental Temp: 0-55°C (32-131°F)
- Enclosure Protection: IP68 water-proof rated for the sensor, IP67 for the integrator
- Integrator Detachable: Yes
- Pressure: PN16
- Flow Sensor Cable: 1.2m (5m length available)
- Temperature Sensor Cable: 1.2m (5m length available)

**Pressure Loss**

The pressure loss of a flow sensor is proportional to the square on the flow: \( \Delta p = k \times q^2 \)

Here \( \Delta p \) is pressure loss, \( q \) is volume flow rate and \( k \) is the coefficient.

All meters have \( \Delta p \) less than 0.25bar at \( qp \).

Order Specifications

- **Unit System**
  - M: Metric (Default)
  - E: English / US Gal

- **Pressure**
  - 1: 1.6MPa (232 psig)

- **Temperature**
  - A: Standard Temperature

- **Pipe Joint**
  - BSP
  - NPT (Meter body will have BSP threading with NPT Extension pieces)
  - DIN Flange (Standard for DN50 and above)
  - ANSI Flange (Upon request for DN50 and above)

- **Output Interface**
  - Serial TTL (opto-isolated)
  - M-Bus (Default)
  - RS485 / Modbus
  - Pulse (OCT)

- **ID**

*Note: Larger sizes available upon request.

**Note: The thermal well will have the same threading.

Optional Adapter

(The Output Interface for the above main unit must be Serial TTL)

Example

**280T-SDN025-1-A-1-M**

stands for the 280T-S tPrime™ series BTU meter for pipe DN25mm with M-Bus interface, BSP pipe joint (a pair of extension pieces and a T-connector thermowell are included). Standard pressure and temperature rating.

**280T-SDN100-1-C-1-M**

stands for the 280T-S tPrime™ series BTU meter for pipe DN100mm with M-Bus interface, DIN flange pipe joint, standard pressure and temperature rating.
tPrime™ Series 280T-S
ULTRASONIC HEAT METER

Small size BTU meter (DN15-DN40)

- Integrator
- Interface Cable
- Flow Sensor Cable
- Temperature Sensor Cable
- Temperature Sensor 1 (already installed)
- Integrator Holder
- Flow Sensor
- Temperature Sensor 2
- Tail Piece / Extension Piece
- T-connector / Thermal well
- Gasket
Large Size BTU Meter (DN50 and DN65)

- Integrator
- Flow Cell
- Mounting Pocket for Temp Sensor
- Interface Cable
- Flow Sensor Cable
- Temp Sensor
- Temp Sensor Cable
tPrime™ Series 280T-S
ULTRASONIC HEAT METER
MEASURE TODAY. ENSURE TOMORROW.

Large Size BTU Meter (DN80-DN300)

• Integrator
• Flow Cell

• Interface Cable
• Flow Sensor Cable
• Temp Sensor
  (Includes Thermal well for DN80 and above)
• Temp Sensor Cable

• Temp Sensor
• Thermal Well
• Mounting Pocket

About Spire Metering Technology

Spire Metering is a global leader in flow and energy management solutions. Through continuous innovation, we transform complex ultrasonic technology into affordable, reliable solutions for accurate flow and energy measurement. Spire Metering offers water, heat, and electricity meters as well as AMR/AMI solutions. To find out how we can help today, please tell us about your application.
